Southern Shrimp Alliance Comments
Coral Amendment 11 / Shrimp Amendment 12

NOAA-NMFS-2026-1750

Submitted through Regulations.gov

October 15, 2026

Karla Gore
National Marine Fisheries Service
Southeast Regional Office
Sustainable Fisheries Division
263 13th Avenue South
St. Petersburg, FL 33701-5505

Dear Ms. Gore:

The Southern Shrimp Alliance submits these comments to request that the National Marine Fisheries Service approve, in full, Amendment 11 to the Fishery Management Plan for Coral, Coral Reefs, and Live/Hardbottom Habitats of the South Atlantic (Coral FMP) and Amendment 12 to the Fishery Management Plan for the Shrimp Fishery of the South Atlantic Region (Shrimp FMP) (hereinafter jointly referred to as "Amendments 11/12").[1]

Established in 2002, the Southern Shrimp Alliance represents independently owned shrimp fishing operations and related shoreside businesses across the coastal South Atlantic and Gulf of America. The Southern Shrimp Alliance's membership includes participants in the rock shrimp fishery, as well as shoreside businesses and fishery-dependent communities that are directly impacted by access to traditional commercial fishing grounds for rock shrimp, including areas within the Oculina Bank habitat area of particular concern (OHAPC) covered by

Reg. 59,098 (NMFS Sept. 18, 2026) (Announcement of availability of fishery management plan amendments; request for comments) ("*Sept. 18 Federal Register Notice"*).

Amendment 8 to the Coral FMP.[2] Accordingly, the Southern Shrimp Alliance has strong interests in Amendments 11/12 and has consistently expressed support for these Amendments,[3] as well as Amendment 10 to the Coral FMP.[4] On behalf of the warmwater commercial shrimp industry, the Southern Shrimp Alliance appreciates the opportunity for industry members to continue to participate in the long, careful process that has arrived at a solution representing "the best balance between historical rock shrimp fishing access and habitat protection."[5]

I. History of the OHAPC Closure

As explained in the September 18th *Federal Register* notice, in 1984 the National Marine Fisheries Service (NMFS) published a final rule implementing the designation of a 92 square nautical mile (NM^2) portion of the Oculina Bank as the OHAPC in order to protect the unique coral reef ecosystem of *Oculina varicosa* (ivory tree coral).[6] "As part of the OHAPC designation there is a prohibition on the use of bottom trawls, bottom longlines, dredges, traps, and pots within the OHAPC to mitigate the risk of damage by fishing gear to *Oculina* coral."[7] Moreover, there is also a prohibition on anchoring within the OHAPC for all fishing vessels "to prevent physical impact to the coral structures."[8]

Sixteen years later, in 2000, the geographic coverage of the OHAPC was expanded through Amendment 4 to the Coral FMP[9] and fourteen years after that, in 2014, the boundaries of the OHAPC were extended northward through Amendment 8 of the Coral FMP.[10]

Meanwhile, additional requirements were imposed on commercial fishermen operating in the rock shrimp fishery. In 2003, Amendment 5 of the Shrimp FMP required boats holding

commercial rock-shrimp limited access permits to utilize a vessel monitoring system (VMS).[11] Later, Amendment 8 to the Coral FMP allowed for fishermen to transit through the OHAPC, "with an increased VMS ping rate of 1 ping per five minutes during transit time."[12]

As also acknowledged in the September 18th *Federal Register* notice, NMFS received extensive comments in July 2014 submitted on behalf of 257 "rock shrimp fishing vessel owners, captains and crew, rock shrimp processors, dealers, distributors, retailers and consumers, industry representatives and various other small business owners and workers providing goods and services to the South Atlantic rock shrimp fishery."[13] These comments explained "that a narrow portion of the expanded OHAPC along the eastern boundary was a historically important rock shrimp fishing ground."[14] The September 18th *Federal Register* notice characterized the circumstances as follows:

> Although the use of this area by the rock shrimp fleet is variable and depends on environmental conditions, industry representatives maintained that access to this narrow strip is critical for the economic viability of the fleet during periods when rock shrimp follow the Gulf Stream to the offshore side of the reef. Rock shrimp fishermen requested adjustment of the proposed OHAPC boundary expansion in Amendment 8 and provided coordinates for their important fishing grounds in the area proposed for the expansion of the OHAPC. Because this request from industry happened late in the development of Coral Amendment 8, the Council determined that it did not have sufficient time to evaluate the request, given concerns that included verification of the provided coordinates, as well as data on effort and yield of historic rock shrimp fishing in the proposed area. Therefore, it was decided not to change the proposed expansion of the OHAPC boundary contained in Coral Amendment 8, but instead to consider the fishermen's request of a possible OHAPC boundary adjustment through a new amendment to the Coral FMP.[15]

In fact, participants in the limited-access rock shrimp fishery emphasized their commitment to the preservation of the coral reef ecosystem of *Oculina varicosa*, the extensive steps taken by commercial fishermen to ensure no adverse impact on coral habitat through trawling activities, and a continued willingness to abide by any regulatory measures rooted in sound science:

> The South Atlantic shrimp industry is committed to coral protection in concept and in practice. The fishery employs state of the art WinPlot™ technology to precisely and continuously monitor the position of its nets to target soft substrate shrimp habitat and to avoid coral structure and hard substrate coral habitat. Further, there is a strong economic disincentive for shrimp fishermen to allow their gear to interact with and be damaged by coral, and to fish on unproductive hard substrate habitats. Therefore, by definition, any contemporary WinPlot™ record of a rock shrimp trawl track confirms the absence of coral and coral habitat. Although the threat of shrimp fishing activity to coral is extremely small to nonexistent, the industry supports reasonable measures to protect coral that are based on sound science, are consistent with the law and that achieve an appropriate balance between legitimate coral protection objectives and the economy of our industry and fishery dependent communities.[16]

In 2020, a recommendation was made to develop an Amendment 10 to the Coral FMP that would propose the creation of a shrimp fishery access area (SFAA) within the OHAPC permitting commercial fishermen to once again operate in a historic fishing area.[17] "That action aligned with the Presidential Executive Order (E.O.) on Seafood Competitiveness and Economic Growth to 'reduce burdens on domestic fishing and to increase production within sustainable fisheries' for commercial fishermen who have lost access to areas that have been traditionally fished."[18] As developed, Amendment 10 to the Coral FMP explained that "the rock shrimp portion of the shrimp fishery has been consistently operating well below [optimum yield (OY)] and maximum sustainable yield levels."[19]

In a September 2021 meeting, the South Atlantic Fishery Management Council (Council) recommended approval of Amendment 10 to the Coral FMP and submitted the Amendment to NMFS for Secretarial review in December 2021.[20] However, in July 2022, NMFS disapproved the Amendment.[21]

Amendments 11/12 have now been developed by the Council to address any possible deficiencies perceived within Amendment 10 to the Coral FMP and "incorporate updated scientific data and analysis as well as amending the Shrimp FMP to address the need to achieve OY in the rock shrimp fishery."[22] The agency summarized the updated scientific data and analysis as follows:

---

> Two new surveys are incorporated into the record in Amendments 11/12. In 2022, a NMFS Southeast Fisheries Science Center visual survey using a towed camera system covered approximately 35 kilometers over an area that included the proposed SFAA and found no evidence of live, dead, or rubble *Oculina* coral within the proposed SFAA. Additionally, in April 2025, the NOAA Ship Nancy Foster completed a high-resolution acoustic mapping expedition that included the area of the proposed SFAA. This mapping data confirms that the proposed SFAA consists of low-relief sandy and muddy bottoms, lacking the high-relief mounds required to support *Oculina* colonies.
>
> As part of Amendments 11/12, a bycatch practicability analysis (BPA) was developed to identify bycatch and habitat impacts that were not described in Coral Amendment 10. The BPA reviews rock shrimp fishery observer data from 2018 through 2022 and documents that bycatch in the rock shrimp fishery is primarily composed of non-managed invertebrates. The occurrence of South Atlantic snapper-grouper species managed by the Council and NMFS is negligible in any bycatch from the rock shrimp fishery. The BPA also addresses the risk of sedimentation on deep-water coral pinnacles. Based on the location of the proposed SFAA which is approximately 360 to 1,580 meters away from known coral pinnacles and the oceanographic currents in the area, this buffer is expected to minimize the risk of sedimentation plumes impacts to habitat to the extent practicable. The BPA also concludes the use of specialized gear (Turtle Excluder Devices and Bycatch Reduction Devices), which combined with the sandy and muddy-bottom location of the SFAA, effectively minimizes bycatch mortality.[23]

In sum, as Amendment 8 to the Coral FMP implemented a prohibition against shrimpers accessing historical grounds within the limited-access rock shrimp fishery, the industry has engaged with the Council and NMFS in a decade-plus process to identify a solution that "provides the best balance between historical rock shrimp fishing access and habitat protection."[24]

II. Amendments 11/12 Carefully and Appropriately Balance Interests

Through a twelve-year process, NMFS is now considering amendments to FMPs that would establish an SFAA of roughly 14.1 NM^2 running along the eastern boundary of the northern extension of the OHAPC. As such, the proposed Amendments impact a small sliver of the expansion of the geographic boundary of the OHAPC implemented through Amendment 8 to the Coral FMP and make *no changes* to the OHAPC as originally demarcated or expanded through Amendment 4 to the Coral FMP. Further, even within the 14.1 NM^2 area at issue, the SFAA would not impact any of the other restrictions in effect within the entirety of the OHAPC. Stated differently, the boundaries of the fully expanded OHAPC are not impacted by Amendments 11/12, as the only changes contemplated would result in the creation of an SFAA

---

[23] *Id.* at 59,100.

[24] *Id.*

within the OHAPC: "All other existing restrictions in the OHAPC, including the prohibitions on anchoring and the use of bottom longline, dredge, pot, or trap gear, would continue to apply in the proposed SFAA."[25]

The creation of an SFAA would permit only "a shrimp vessel with a valid Federal limited access commercial vessel permit for rock shrimp . . . to bottom trawl for rock shrimp."[26] As of October 7, 2026, there are a total of 100 Rock Shrimp (South Atlantic EEZ) Limited Access permits identified ("RSLA") by NMFS.[27] Accordingly, Amendments 11/12 would permit a small number of vessels – all identified in a public registry – to access a small tract of sandy bottom within the OHAPC that, prior to the implementation of Amendment 8 of the Coral FMP, had been commercially fished for at least sixty years.

Moreover, the limited number of commercial fishing vessels granted access to the SFAA within the OHAPC would remain subject to strict monitoring standards regarding their activities:

> Current regulations which require the use of a NMFS-approved VMS on a vessel for an owner or operator with a limited access endorsement for South Atlantic rock shrimp or a commercial vessel permit for rock shrimp in the South Atlantic Federal waters would remain unchanged in the OHAPC and the proposed SFAA. Vessels are required to maintain a VMS transmission rate of 1 position per 5 minutes when transiting through both area or fishing in the SFAA (50 CFR 622.205 and 50 CFR 622.224(b)(1)(i)(C)). The current transmission rate is considered effective in monitoring fishing activity within and near the OHAPC. Amendments 11/12 would also not change the current transit provisions for rock shrimp vessels within the OHAPC. Under these provisions, transit means a direct and non-stop continuous course through the area, maintaining a minimum speed of 5 knots as determined by an operating VMS and a VMS minimum ping rate of one ping per 5 minutes; fishing gear appropriately stowed means that doors and nets are out of the water (50 CFR 622.224(b)(1)(i)(C)).[28]

Although the Southern Shrimp Alliance believes that American shrimpers have been unfairly and inappropriately denied access without sound scientific basis to fishing grounds of substantial economic importance, Amendments 11/12 are the product of a fact-specific, scientifically-driven multiyear process that recognizes legitimate concerns of commercial fishermen in the context of a shared commitment to the preservation of critical habitat.

---

27 *See* **Attachment**, obtained from https://appsportal.fisheries.noaa.gov/FOIA-Southeast. As indicated in the **Attachment**, of this total, seven of the permits are indicated to be "expired" and one denotes that the vessel was sold.

28 *See Sept. 18 Federal Register Notice*, 91 Fed. Reg. at 59,100.

III. NMFS Should Approve Amendments 11/12 and Issue a Final Rule Implementing the Amendments as Quickly as Possible

Opposition registered thus far to Amendments 11/12 attack a caricature of the proposed measure. Rather than address the small area within the existing OHAPC that would be re-opened to a single commercial fishing activity, comments criticize commercial fishing generally, make sweeping invective against trawling, and imagine significant harm to *Oculina* colonies. But these claims are simply unsupported by the scientific data and analysis before the agency.

We are now over four years removed from the agency's disapproval of Amendment 10 to the Coral FMP. In the intervening period, the development of Amendments 11/12 has fully addressed any possible claims of deficiencies with respect to Amendment 10 while, at the same time, small, family-run businesses exit the commercial shrimp industry under extreme economic duress. The delay in taking action to restore access to the small area demarcated by the SFAA under highly-controlled conditions has unfairly and inappropriately imposed regulatory burdens on commercial fishermen that have no meaningful conservation benefit.

Section 4(a)(i) of Executive Order 14276, *Restoring American Seafood Competitiveness* (Apr. 17, 2025), states:

> The Secretary of Commerce shall request that each Regional Fishery Management Council, within 180 days of the date of this order, provide the Secretary of Commerce with updates to their recommendations submitted pursuant to Executive Order 13921, to reduce burdens on domestic fishing and to increase production. Building upon the earlier goals, identified actions should stabilize markets, improve access, enhance economic profitability, and prevent closures. The Regional Fishery Management Councils will commit to a work plan and a schedule for implementation to ensure these actions are prioritized.[29]

In response to this instruction, NMFS identified shrimp amongst its "initial list [that] includes heavily overregulated stocks or fisheries with large reductions in landings or revenue as well as stocks or fisheries identified via recent stakeholder input."[30] The inclusion of shrimp appropriately recognizes the severe decline in landings experienced by the commercial warmwater shrimp fishing industry following a flood of unfairly-traded imports into the U.S. market in 2021. As such, there can be no dispute that the approval and implementation of Amendments 11/12 would reduce burdens on domestic fishing and increase production.

In full consideration of these circumstances, NMFS must approve and implement Amendments 11/12 as quickly as possible.

---

[29] Executive Order 14276 of April 17, 2025, *Restoring American Seafood Competitiveness,* 90 Fed. Reg. 16,993 (Presidential Documents Apr. 22, 2025).

[30] *Recommendations for Restoring American Seafood Competitiveness*, 90 Fed. Reg. 41,818 (NMFS Aug. 27, 2025) (Notice; Request for comment).

IV. Conclusion

The development of Amendments 11/12 illustrates how careful, deliberate consideration of the concerns of the commercial fishing industry can be balanced with valid conservation objectives to achieve workable, narrow compromises facilitating limited economic activity while preserving critical habitat. Rejection of these proposals – or continued unreasonable delay in the implementation of the SFAA – undermines further good faith efforts to engage in similar future exercises.

The Southern Shrimp Alliance commends all participants in the commercial rock shrimp fishery that have remained committed to ensuring that sound science and objective facts govern the regulation of their historical fishing grounds and is grateful for the extensive efforts of the Council to consider these fishermen's concerns. These FMP amendment proposals are of substantial importance to the household income of the families participating in the rock shrimp fishery and we request that NMFS fully account for the practical, direct impact that its consideration of these Amendments will have on their fellow Americans.

Thank you for your consideration.

Respectfully submitted,

Blake Price
Executive Director
Southern Shrimp Alliance
